Polyethylene

## Part Guard Protective Netting

PART GUARD netting is ideal solution for part protection and packaging. The diamond-pattern netting is made of polyethylene, it is non-corrosive, resistant to most chemicals, and its open mesh design allows for air circulation around items.

Techflex® offers Part Guard in 5 versions. Each type has its own range of color-coded sizes to fit multiple diameters.

### PART GUARD I

A thin netting with a close mesh design ideal for cushioning small parts.

### PART GUARD II

Elastic netting stretches to snugly fit irregularly shaped objects; suitable for protection in medium to heavy abrasion environments.

### PART GUARD III

The strongest protective non-elastic netting. A thick (3/32"), rigid mesh to protect parts from heavy abrasion.

### PART GUARD IV

A specialty netting ideal for irregularly shaped part and large diameters.

### PART GUARD V

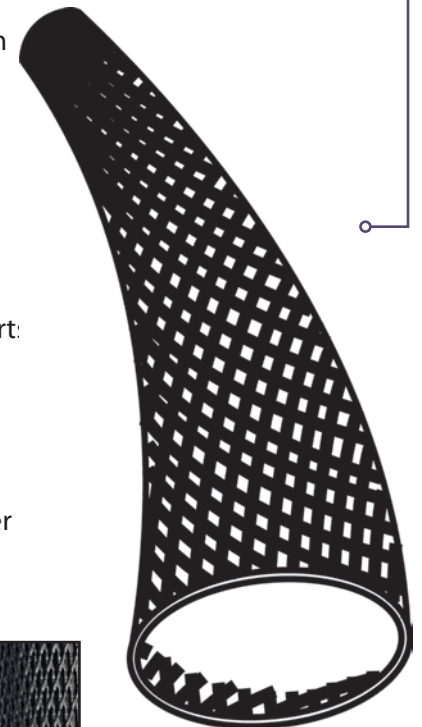

A stretchable mesh offering medium protection. Ideal for covering asymmetrical and contoured parts, as well as a wider diameter range with fewer products.

Colors Available:

White (WH), Yellow (YL), Orange (OR), Red (RD), Green (GN), Blue (BL), Gray (GY), and Black (BK).

- Colors Available:
- Black (BK)
  - Green (GN)
  - Purple (PP)
  - Brown (BR)
  - Yellow (YL)
  - Blue (BL)
  - Red (RD)
  - White (WH)
  - Orange (OR)
  - Natural (NT)
  - Gray (GY)

Each type of Part Guard netting exhibits its own stretch and recovery characteristics. Some are best for protecting straight shafts or cylinders, others are better for protecting unusual shapes.

Diameter	Part #	Available Colors	Wall Thickness	Protection	Stretch	Bulk	Shop Spool	Lbs/100'
----------	--------	------------------	----------------	------------	---------	------	------------	----------
